Complex

Sara Goering

*Professor
Philosophy*

University of Washington,
Seattle

ABSTRACT:

The BRAIN Initiative and other funding sources often encourage or even require the integration of ethics into large scale scientific research projects, but what does ethics integration mean, and how might we measure the successes of such integration efforts? This talk explores such questions through an analysis of data from an interview project at the UW Center for Neurotechnology.

BIOGRAPHY:

Sara Goering is Professor and Chair of the Department of Philosophy at the University of Washington, Seattle, and co-leads the UW Neuroethics Research Group, which grew out of the UW Center for Neurotechnology. Her work focuses on ethics related to neurotechnology, philosophy of disability, and feminist philosophy, especially relational identity theories.
